name of the dataset: BRC - Caddisfly (Trichoptera) records from Britain and Ireland to 2012

type of dataset (more information): species distribution data

data type: point data/observation data

short description of the dataset/summary:
This Trichoptera dataset originates from the National Trichoptera (Caddisfly) Recording Scheme. The survey data comes in four categories ranked in terms of contribution: volunteer recorders; statutory monitoring bodies, especially the Environment Agency; major national, and many local, entomological journals; museum collections. Recording is still continuing and annual up-dates are an aspiration. Many local check-lists are being prepared for electronic and paper publication. The data set contains records from a variety of well-circulated sources e.g the literature, that are considered incorrect. These are included, with an explanation, to flag-up that they have been assessed to assist researchers who encounter them elsewhere.

science keywords according to GCMD:

ISO topic category according to ISO 19115:

Terrestrial Hydrosphere

Biota, Environment, Inland Waters

### comments:

[Metadata were harvested from NBN. Currently there is no automatic update of data through the BioFresh Data Portal. Please check the original source (NBN) for information about revised or updated entries before using the data.]
Intellectual property rights and citation

(if the database is already published):

dataset creator (data compiler):
- contact name: Biological Records Centre
- contact email: brc@ceh.ac.uk

data contributors to/owners of this dataset: single

criteria for using the data in a publication/scientific analysis:
The dataset is publicly available (data portal, data archive) and can be used without restrictions, but must be acknowledged and cited correctly.

other/additional criteria: For using and referencing data from the NBN Gateway please see https://data.nbn.org.uk/Terms

citation of this dataset:

citation of the metadata: comments: All the survey data were collected by volunteers and input via the scheme organiser Ian Wallace before being sent to BRC in electronic format.
General data specifications

**regional coverage of the dataset:**
- scale of the dataset: national
- continents: Europe

**spatial extend (bounding coordinates):**
- southernmost latitude [°]: 49.814355
- northernmost latitude [°]: 60.910059
- westernmost longitude [°]: -10.812500
- easternmost longitude [°]: 1.830078
- minimum altitude: -4.6 metres
- maximum altitude: 1344 metres
- countries: Europe: Ireland, United Kingdom
- comments: Recording for this dataset is reasonable in England and Wales but more patchy in Scotland. Ireland both north and south are covered by a recording scheme operated by Jim O'Connor of the National Museums of Ireland. The Isle of Man but not the Channel Isles are also covered. The two major national recording schemes plan a joint atlas for the British Isles.

**comments:** Includes records from 1859-2003 of varying quantity. There is a peak of activity in 1941 and also from 1976-88.
Dataset: BRC - Caddisfly (Trichoptera) records from Britain and Ireland to 2012

Site specifications

coordinate system/grid data:
  grid data available: yes

number of sites: >1000
  exact number of sites: 3134

comments: Number of recorded species: 202
Biological data

biological data origin: general compilation

specify method: Paper and card data sheets, electronic notes, and lists, literature, specimens

organism group addressed: macro-invertebrates (Trichoptera)

comments: Ironoquia dubia; Glossosoma intermedium; Hagenella clathrata
Sample resolution

**macro-invertebrates:**
**taxonomic resolution:** species
percentage of species level data: 100
Other specifications

GIS layers, shapes related to the dataset: species distribution

availability of photos: no

availability of maps: yes

quality control procedures:
Were any quality control procedures applied to your dataset? yes

quality control protocols and comments: Records were validated and verified by Ian Wallace, sometimes from voucher specimens.
